Site Contact Donna Ainsworth

Scope of Work**Rear Garden**

T4 Lombardy poplar located on the rear boundary of n.o 22 Tope road.

The tree is mature and its size has been managed by pollarding. The canopy consists of 5 primary limbs. The Northern side of the canopy is dead, there is only one live limb remaining on the Southern side. The tree is within reaching distance of multiple properties.

There have been recent reports of secondary limbs failing and falling across the boundary fence into neighbouring gardens.

Due to the size, location and condition of T4 I feel it is necessary to remove the tree to near ground level and to treat the resulting stump to deter any re generation

Method of works

To sectionally dismantle the tree down to ground level and to remove all resulting waste from the garden.

To treat the stump using EcoPlugs to help deter re generation and "suckering"

Webster's
Arboricultural
Services Ltd

T3 Lombardy poplar located on the rear boundary of n.o 22 Tope road.

Scope of Works

The tree is mature and its size has been managed historically by pollarding.

I estimate it was 3 years ago since the tree was last pollarded.

Due to the tree's size and close proximity to other properties I strongly recommend the tree is re pollarded. If the size of the tree is not managed there is an increasing risk of limb failure and an increase in cost to then manage the tree as the canopy increases in size.

Method of Works

To re pollard the tree back to the previous pollard points.

This action will reduce the canopy of the tree and any potential of limb failure.
